# QUICKVISION IMAGING SOFTWARE

## User-friendly

Simple, straightforward icons indicate the functions in the Quickvision software, allowing you to easily control your diagnosis imaging workstation and take advantage of all the image processing capabilities: contrast enhancement, measurements, video-inversion, zoom, filters, pseudo-colors, pseudo-3D and much more.

## Decisive advantages for you and your patients

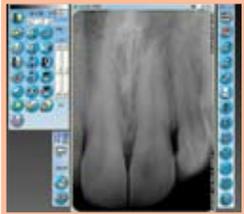

Complete efficiency and optimum profitability. This technology not only contributes to a quicker, more reliable diagnosis, it also helps you to communicate with the patient by letting you illustrate your diagnosis directly on the screen, helping them to understand and accept it.

## Two Modules

Includes intraoral camera images and Digital X-Ray images totally interfaced and on a clinical chart of the patient's mouth.

The intraoral portion allows input from digital cameras and all intraoral cameras.

The Digital X-Ray module allows input from scanners, sensors and some Digital Panoramic machines

## High Performance

Enjoy all your digital radiography and panoramic advantages thanks to the Quickvision imaging functions – from diagnostic assistance to storage and communication tools.

### Quickvision Quick Points

- Imaging is controlled using various enhancement tools.
- Cosmetic module for before and after shots.
- Implant module.
- Customizable mounts/templates.
- Multi-user licensing.
- Bridgeability to most practice management software.
- DICOM compatible-for image sharing with colleagues.
- Windows Vista compliant, WIN 98/2000/XP.
- Integration for intra/extraoral cameras, digital sensors, panoramic machines and scanners.
